PREMIUM ORAL CARE

CAVEX ORAL PRE RINSE

Application

Dental guidelines indicate that rinsing the mouth with a solution of 1% to 2% hydrogen peroxide for 30 to 60 seconds reduces the number of microorganisms in the mouth. So pre-rinsing helps to reduce the number of micro-organisms that can escape through aerosols, splashing or direct contact during treatment.

By combining scientific information with years of experience with hydrogen peroxide and mouth rinse products, Cavex Holland BV has developed a new product in record time: "Cavex Oral Pre Rinse", a pre-procedural mouth rinse with 1.5% hydrogen peroxide. If patients rinse their mouth for 30 to 60 seconds with Cavex Oral Pre Rinse before treatment, the chance of contamination with viruses, including the Corona virus, is greatly reduced.

Ingredients

- Erythritol has an antibacterial effect and enhances the cleaning effect
- Glycerin works against a dry mouth.
- Bio-adhesive for the ideal viscosity and foam condition.
- Peppermint for a slightly sweet mint flavor, pleasant for the patient

Cavex Oral Pre Rinse is immediately ready for use. It is available in 500 ml bottles with an integrated dosing cup. One bottle is enough for about 50 mouthwashes.

Characteristics

- Contains 1.5% stabilized hydrogen peroxide (kills viruses, including COVID-19)
- Ready for use
- Effective in 30 to 60 seconds
- Patient-friendly due to the pleasant taste
- Content of 500 ml for about 50 doses
- Bottle with integrated dosing cup
